小狗養成・數據同公開頁說明

Puppy Growth — how the public page gets data
日期：2026-10-10（HKT）
公開頁：https://kollenso.github.io/puppy-growth/
Repo：https://github.com/KollenSo/puppy-growth

1）公開頁點樣連數據？ / How the public page links to data

公開頁唔會直接駁 Interactive Brokers（IBKR）。瀏覽器只會讀本 repo 入面嘅靜態檔案 data/savings_snapshot.json。
The public page never calls IBKR. The browser only fetches the static file data/savings_snapshot.json from the GitHub Pages site.

呢個 JSON 原本由 Finance Manager 用 IBKR Flex（唯讀）匯出，戶口編號 U19879309。而家頁面顯示嘅 IB 餘額只係參考，養成進度刻意由 $0 起計，等下個月開始先計存錢。
That JSON originates from Finance Manager's IBKR Flex read-only export for account U19879309. The IB balance shown is reference-only; puppy growth is forced to $0 until counting starts next month.

2）成個流程 / End-to-end flow

① 每日約 8:23 AM（HKT），Finance 跑：
python3 /workspace/ib/export_savings_snapshot.py
② 產出／更新：/workspace/ib/savings_snapshot.json
③ 而家係人手步驟：把該檔複製到 puppy-growth/data/savings_snapshot.json，再 commit + push 去 GitHub 嘅 main 分支。
④ GitHub Pages 設定係 Deploy from a branch：main，資料夾 /（root）。Push 之後會自動 rebuild（通常約 30–90 秒）。
⑤ 用家開 https://kollenso.github.io/puppy-growth/，頁面 fetch data/savings_snapshot.json 顯示參考數字；成長階段只跟「養成已計入」金額（目前 $0）。

English: Finance runs the export script → box file /workspace/ib/savings_snapshot.json → MANUAL copy into the repo's data/savings_snapshot.json and push to main → Pages auto-rebuilds → the public site loads that JSON.

3）缺口同點解仲係 $0 / Gap & why growth is still $0

缺口：而家冇自動化「複製 + commit」去 KollenSo/puppy-growth。Finance 刷新 box 上嘅 JSON 之後，公開頁唔會自己更新，除非有人（或者之後寫嘅 routine／script）推上 repo。
Gap: there is no automated copy+commit to the GitHub repo. Refreshing the box JSON does not update the public site until someone pushes.

點解成長仲係 $0：產品決定——下個月先開始計存錢；IB 而家約 $2,241（約 4.7% of

$48,000）顯示做參考，唔計入養成進度。餵食／玩耍／摸摸只影響本地心情數值，唔會令隻狗升級。
Why $0: by design until next month. IB ~$2,241 is excluded from growth. Feed/play/pet only change local mood meters, not the growth stage.
